Fifth week flags issued

12.9 percent of freshmen receive warning

By Kath Xu

ASSOCIATE NEWS EDITOR

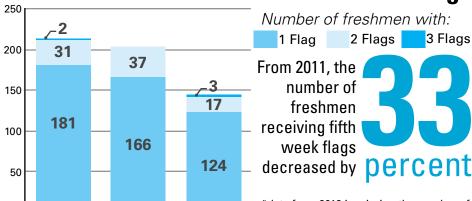

This semester, 144 freshmen, or 12.9 percent of the Class of 2017, were issued fifth week flags. The proportion of recipients is down from almost a fifth of the Class of 2016 last year. Fifth week flags exist as part of an early warning system to encourage students to reevaluate their study habits.

According to Julie B. Norman, the Senior Associate Dean for Undergraduate Education and Director of the Office of Undergraduate Advising and Academic Programming (UAAP), a fifth week flag is issued to any student who is at risk of not passing a class, which means an overall grade of a D or F five weeks into the semester.

The flag consists of an email from the professor describing possible areas of improvement, followed by an email from the Associate Dean for Advising and Academic

Pelosi visits C-Mod, PSFC layoffs delayed

2013

U.S. Representative Nancy Pelosi visited MIT's Plasma Science and Fusion Center (PSFC) Thursday, where she learned about MIT's fusion experiments performed on its tokamak Alcator C-Mod, according to MIT News. The experiment faces an uncertain future and may fail to receive federal funding in FY 2014.

2012

Pelosi discussed MIT's fusion research and learned about the hot magnetically confined fusion plasmas that MIT researches with C-Mod. Proponents of fusion research suggest the technology could someday provide a clean source of energy. MIT News reported that C-Mod currently is in a "warm shutdown" status until Congress decides whether to make funding available in the 2014 budget.

Though Congress has yet to restore fund-

ing, according to an email MIT Vice President for Research Maria T. Zuber wrote to The Tech on Oct. 8, C-Mod layoffs have been rescinded through the end of 2013 "to maintain the facility staff with the hope that Congress will pass a budget at some point ... that would restore operation."

Fusion research has been a popular topic in the House of Representatives, according the News Office. According to the American Institute of Physics, fifty members of Congress signed a letter this April in support of the Fusion Energy Sciences Program. The requested \$458.3 million would go to the same budget that has historically been the source of funding for C-Mod, but cuts

to this budget may affect C-Mod.

SKANDA KOPPULA—THE TECH

One of the two Hamlets (Mark L. Velednitsky '14) bemoans the pitiful conditions of Elsinore in Friday's performance of Hamlet by MIT's Shakespeare Ensemble. The role of Hamlet was played by two leads in part to display the internal struggles of the character.

NEWS BRIEFS

Grad student housing group "still deliberating"

The Graduate Student Housing Working Group was formed to "focus on how we might best house our graduate students" according to the May/ June faculty newsletter. In August, the group's chairman Professor Phillip L. Clay wrote in an email to The Tech that the group planned to "issue a report in October." However, Dean for Graduate Education Christine Ortiz, a member of the group, wrote that the group is "still deliberating" and offered no updates in an Oct. 28 email to The Tech.

Community forums to discuss future of East Campus development

According to an email to the MIT community from Acting Provost Martin A. Schmidt and Executive Vice President and Treasurer Israel Ruiz, MIT has recently gained the right to develop "over a million square feet of new development, which will be a combination of housing, retail, commercial, and open space."

The email announced that the urin design team commissioned to perform a "design study [and to] envision the future of our east campus" will hold several MIT community forums to "solicit [community] input and share the study progress."

Cambridge citizen files complaint

Charles D. Teague of Cambridge filed an Open Meeting Law Complaint against the City of Cambridge, disputing a vote on the Net Zero Emissions Amendment (NZEA), according to a proposed response drafted by Assistant Attorney General Amy Nable. Had it taken effect, the NZEA would have prevented MIT developing Kendall Square in any way that was not carbon neutral.

According to the document, Teague believes that, in April, the Mayor Henrietta Davis violated the rules by changing her vote in favor the proposed amendment to a "present" vote after she learned that the amendment would likely cause MIT to be unable to honor a commitment letter that MIT wrote to the council "describing obligations that MIT would perform for the public benefit if the [MIT-proposed] zoning amendment were adopted."

Brazil acknowledges spying on US diplomats

RIO DE JANEIRO — Brazil's government acknowledged Monday that its top intelligence agency had spied on diplomatic targets from countries including the United States, Iran and Russia, putting Brazilian authorities in the uncomfortable position of defending their own surveillance practices after repeatedly criticizing U.S. spying operations.

Brazil's Institutional Security Cabinet, which oversees the nation's intelligence activities, contended in a statement Monday that the spying operations, involving relatively basic surveillance about a decade ago of diplomats and diplomatic properties in Brazil, were "in absolute compliance" with legislation governing such practices.

The statement came in response to a report in the newspaper Folha de São Paulo describing how the Brazilian Intelligence Agency, commonly known as Abin, had followed some diplomats from Russia and Iran by foot and by car, photographing their movements, while also monitoring a commercial property leased by the U.S. Embassy in Brasília, the capital.

By almost any measure, such modest operations stand in sharp contrast to the sweeping international eavesdropping operations carried out by the National Security Agency. Brazil's president, Dilma Rousseff, recently postponed a state visit to Washington following revelations that the NSA had spied on her and the Brazilian oil giant Petrobras.

–Simon Romero, The New York Times

For the NFL, a question of pranks or abuse

Jonathan Martin and Richie Incognito spent most of the season side by side, a pair of 300-pound men made rich from football, crouched inches apart on the offensive line of the Miami Dolphins. When the defense took the field, they sat on the bench in order of their position — Martin, the left tackle, next to Incognito, the left guard. They were as connected as teammates could be — though they could hardly be more different. Now Martin and Incognito are gone from the team, at least temporarily, opposites embroiled in a twisted controversy over hazing and workplace abuse.

Martin, a Classics major who attended Stanford and the son of two Harvard graduates, left the Dolphins last week after falling victim to the latest in a two-season string of hazing incidents. Incognito, a 30-year-old veteran with a reputation for dirty play and a history of rough behavior, was suspended indefinitely by the Dolphins late Sunday while the team and the league investigated the matter.

Their unfolding saga is forcing the National Football League to uncomfortably turn its gaze toward locker room culture and start defining the gray areas between good-natured pranks and hurtful bullying. For years, young players in the NFL have been subjected to a wide swath of indignities straight from the hallways of high school or the back rooms of fraternity houses. Young players are often expected to carry teammates' equipment off the field. They are sometimes forced to sing or otherwise entertain teammates on demand, left helplessly taped to goal posts or asked to regularly bring sandwiches or fast food to teammates

ESPN and the Associated Press, among other outlets, citing unnamed sources, have reported that Incognito sent threatening and racist voice-mail and text messages to Martin. Incognito is white, and Martin is black.

Most incidents come with the tacit, unsupervised approval of coaches and executives, who see the pranks as a rite of passage, a worthy bit of team building and character strengthening. But the hazing generally stays within the macho atmosphere of the locker room. The Dolphins' latest problems — symbolized by a pair of behemoth millionaire teammates turned archetypical opposites — burst into the public in recent days, forcing the team to address the matter.

Morsi calls trials 'illegitimate,' and case in Egypt is delayed

By David D. Kirkpatrick and Mayy El Sheikh

THE NEW YORK TIMES

CAIRO — As Egypt's new military-led government consolidates its power, Mohammed Morsi, the deposed president, went on trial Monday, facing charges of inciting the murder of protesters, but he rejected the court's authority and proclaimed himself to be the country's legitimate ruler.

The trial got off to a late start, and the case was soon adjourned until Jan. 8. The trial's brief opening was Morsi's first public appearance since his removal from office on July 3 and, in a dizzying turn for Egypt, the second criminal trial of a former head of state in less than three years. Former President Hosni Mubarak, ousted in February 2011 and now under house arrest in a military hospital, is facing a retrial at the same site, the auditorium of a police academy.

According to the website of Al Ahram, Egypt's flagship state newspaper, the trial got underway as Morsi and 14 other Islamist defendants appeared in a caged dock and court

officials called out their names. But news reports said the hearing was first delayed and then suspended after Morsi refused to dress in prison clothing and chants by his co-defendants drowned out the proceedings.

Journalists who were allowed into the courtroom were not permitted to take telephones or other communications devices, limiting the flow of information. But witnesses in the courtroom said that Morsi declared, "This trial is illegitimate," and said he was still Egypt's lawful president.

Morsi's Islamist allies in the Muslim Brotherhood had called for major protests against the trial, and the Interior Ministry said it had deployed thousands of riot police officers to secure the streets. Shortly before 11 a.m., as the trial began, the streets remained quiet, but the number of demonstrators began to grow from only a few dozen to perhaps 100 in two locations outside the court.

Pro-Morsi demonstrators gathered in larger numbers at the Supreme Constitutional Court in the Maadi district of southern Cairo, witnesses said.

For the new government installed

by Gen. Abdel-Fattah el-Sissi, the trial will be a ritual demonstration of its repeated assurances that there will be no turning back from the overthrow of Morsi or from the cancellation of the Islamist-drafted constitution approved in December in a national referendum. The court proceedings add formal legal legitimacy to Morsi's incarceration, analysts said, so that it is no longer by military fiat alone.

He is charged with inciting the murders of protesters outside the presidential palace in December. As aggressive protesters began encircling the palace, the police refused to protect it. So on Dec. 5, leaders of the Muslim Brotherhood called for the president's Islamist supporters to do the job. A night of deadly fighting ensued, with Molotov cocktails and gunshots coming from both sides. By morning, at least 11 people were dead, including eight supporters of the president and three non-Islamists, according to news reports. Prosecutors have not charged anyone over the Islamists' deaths, and the charges against Morsi are related to the killing of three non-Islamists.

As US weighs spying changes, officials want data sweeps to go on

By David E. Sanger

THE NEW YORK TIMES

WASHINGTON — The Obama administration has told allies and lawmakers it is considering reining in a variety of National Security Agency practices overseas, including holding White House reviews of the world leaders the agency is monitoring, forging a new accord with Germany for a closer intelligence relationship and minimizing collection on some foreigners.

But for now, President Barack Obama and his top advisers have concluded that there is no workable alternative to the bulk collection of huge quantities of "metadata," including records of all telephone calls made inside the United States.

Instead, the administration has hinted it may hold that information for only three years instead of five while it seeks new technologies that would permit it to search the records of telephone and Internet companies, rather than collect the data in bulk in government computers. Gen. Keith B. Alexander, head of the NSA, has told industry officials that developing the new technology would take at least three years.

But protests from business executives, who told Obama last week at a White House meeting that they feared the NSA revelations would lead to billions of dollars in lost business in Europe and Asia, has forced a rethinking inside the White House.

In testimony, Alexander and James R. Clapper Jr., director of national intelligence, have shown little willingness to make major changes, apart from agreeing to more oversight and public disclosure of some Foreign Intelligence Surveillance Court decisions. The White House has pressed for more. Nonetheless, the actions contemplated inside the administration seem unlikely to quell the protests in Europe or

assuage critics at home. The sharpest public criticism of the NSA from within the administration has come from one of the chief clients for its intelligence reports: Secretary of State John Kerry. "The president and I have learned of some things that have been happening in many ways on an automatic pilot, because the technology is there and the ability is there," Kerry said last week. "Some of these actions have reached too far."

A senior administration official said Kerry's "automatic pilot" reference "went beyond our talking points," but added that the president agreed and "has already made some decisions," which have not been announced.

Alexander's deputy, John C. Inglis, told Congress last week that there was no satisfying alternative to a government library of calls and, seemingly by extension, text messages and many Internet searches. "It needs to be the whole haystack," Inglis said.

WEATHER

Warm week is a pause in approach of winter

By Ray Hua Wu

We have entered November and thus have started to notice below-freezing temperatures popping up now and then in the mornings. At this time last year, we were receiving snow from Sandy's Nor'easter encore. This year, to the contrary, we will be seeing local temperatures

on the rise, until in fact seeing mid to upper 60s°F in the afternoon of Nov. 7.

There is only one month left in the hurricane season, and the Atlantic Basin so far is remarkably inactive. There has so far not been a single hurricane of even Category 2 status. The last year in which no hurricanes have surpassed Category 1 was 1968.

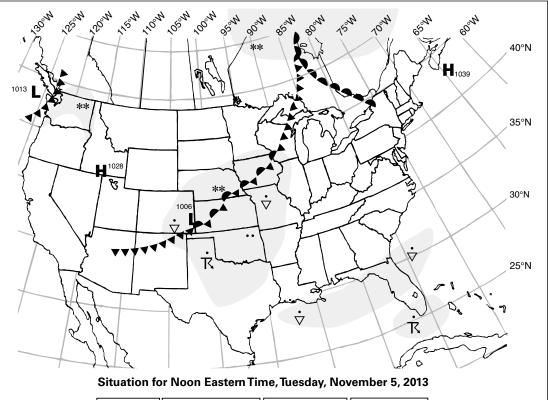

Extended Forecast

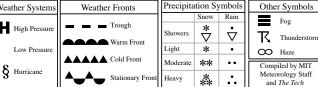

Today: Partly cloudy. High around 51°F (11°C). Winds East up to 10 mph.

Tonight: Occasional morning clouds. Low around 37°F (3°C). Winds Southeast up to 5 mph.

Tomorrow: Mostly cloudy. High around 58°F (14°C). Winds South up to 10–15 mph.

Thursday: A fair amount of rain. High around 66°F (19°C). **Friday**: Clear and cold. High around 46°F (8°C).

SAC Capital agrees to plead guilty to insider trading

By Peter Lattman and Ben Protess

THE NEW YORK TIMES

SAC Capital Advisors has agreed to plead guilty to insider trading violations and pay a record \$1.2 billion penalty, becoming the first large Wall Street firm in a generation to confess to criminal conduct. The move caps a decade-long investigation that turned a once mighty hedge fund into a symbol of financial wrongdoing.

The guilty plea and fine paid by SAC, which is owned by the billionaire investor Steven A. Cohen, are part of a broader plea deal that federal prosecutors in Manhattan announced Monday. It will also require SAC to terminate its business of managing money for outside investors, though the firm will probably continue to manage Cohen's fortune.

SAC's case could inspire other aggressive actions against Wall Street, as the Justice Department's uneven crackdown on financial fraud has gained momentum in recent months. Coming just days before JPMorgan Chase is expected to finalize a \$13 billion settlement with the government over the bank's questionable mortgage practices, the SAC case could stem concerns that financial firms are too big to charge.

In a letter to the court, Preet Bharara, the U.S. attorney in Manhattan, called the penalty "steep but fair" and "commensurate with the breadth and duration of the charged criminal conduct." The letter explained that SAC agreed to plead guilty to each of

the five counts in the indictment.

Cohen, whose enormous compensation and conspicuous consumption have made him an emblem of the new Gilded Age, has not been charged criminally. Still, the plea deal is a devastating blow to Cohen, as the firm that bears his initials will acknowledge that it was a corrupt organization. SAC's admission that several of its employees traded stocks based on secret information also colors Cohen's astounding investment track record. Since 1992, the fund posted average annual returns of nearly 30 percent.

The \$1.2 billion penalty adds to the \$616 million in fines that SAC agreed to pay to regulators earlier this year. Cohen, who owns 100 percent of the firm, will pay those penalties.

Trove of Nazi-looted art reported found in Munich apartment

BERLIN — The German government said Monday that it had been informed months ago about a valuable trove of art discovered in a Munich apartment, which a German magazine describes as a collection of hundreds of works confiscated by the Nazis or sold cheaply by people desperate to leave Germany.

The magazine, Focus, which broke the story Sunday, said the roughly \$1.4 billion worth of artwork had been discovered in 2011 in the possession of the son of an art dealer who was among the few authorized by Joseph Goebbels, Hitler's propaganda chief, to sell confiscated works for the Nazis.

Focus said the collection included paintings by Picasso, Matisse, Franz Marc and Max Beckmann, and that the trove was found customs officials investigating the art dealer's son, Cornelius Gurlitt, for suspected tax evasion.

"The federal government was informed several months ago about the case," Steffen Seibert, a government spokesman said Monday. Neither Seibert nor a spokesman for the finance ministry had any information about claims on the works.

Focus said the collection is being held in a facility in Garching, near Munich, by the Bavarian customs authorities. They declined to comment Monday.

—Alison Smale, The New York Times

Bill on workplace bias clears Senate hurdle

By Jeremy W. Peters

THE NEW YORK TIMES

WASHINGTON — A measure that would outlaw workplace discrimination based on sexual orientation and gender identity overcame a significant obstacle in the Senate on Monday as seven Republicans crossed party lines and voted to begin debate on the bill.

The 61-30 vote means that the full Senate will consider a measure to extend federal nondiscrimination law to gay, lesbian and bisexual people for the first time since 1996 — a stark

reminder, supporters said, that as the public has come around to accepting gay rights, Congress has been slow to keep pace.

Sen. Dean Heller, R-Nev., one of the Republicans who voted to open debate, had announced Monday that he would vote yes on the bill, known as the Employment Nondiscrimination Act, saying that after conversations with voters at home and colleagues in the Senate, he had determined that "supporting this legislation is the right thing to do."

It is the first time that the full Senate has considered a measure that

includes protection for transgender people.

The bill will face other crucial tests this week before the Senate can ultimately schedule a final vote to approve it, but the first filibuster test was a pivotal hurdle.

The anticipated vote comes four months after the Supreme Court invalidated a federal ban on recognizing same-sex marriages, and nearly a year after some conservative leaders warned that losses in the 2012 elections exposed the party as being out of touch with much of the country on social issues.

Vaccine approved for brain fever

The World Health Organization has approved a new vaccine for a strain of encephalitis that kills thousands of children and leaves many survivors with permanent brain damage. The move allows U.N. agencies and other donors to buy it.

The disease, called Japanese encephalitis or brain fever, is caused by a mosquito-transmitted virus that can live in pigs, birds and humans. Less than 1 percent of those infected get seriously ill, but it kills up to 15,000 children a year and disables many more. Up to 4 billion people, from southern Russia to the Pacific islands, are at risk; it is more prevalent near rice paddies.

There is no cure.

The low-cost vaccine, approved last month, is the first authorized by the agency for children and the first Chinese-made vaccine it has approved.

It is made by China National Biotec Group and was tested by PATH, a nonprofit group in Seattle with funding from the Bill and Melinda Gates Foundation.

Dr. Margaret Chan, WHO's director-general, said she hoped that approval would encourage other vaccine makers from China and elsewhere to enter the field.

China had given the vaccine domestically to 200 million children over many years but had never sought WHO approval.

India, which previously bought 88 million doses from China

India, which previously bought 88 million doses from China, launched the first locally produced version last month.

Raising the minimum smoking age in NYC — yet another unjustified intervention

By Aaron Hammond

In a characteristically paternal fashion, late last month, the New York City Council raised the minimum age to purchase cigarettes and other tobacco products. To purchase a pack or even an electronic cigarette, consumers must now be 21 years of age. The justification provided by the City Council rests on the claim that by making the purchase of tobacco nominally more difficult, fewer young people will start smoking in the first place. The data suggests the move might be effective, just like stop-and-frisk. Still, there is a fine line between maintaining public health and trampling on the individual rights of Americans, and the Bloomberg administration has again chosen to jump right across it.

Why 21? Culturally, the age carries significance as the start of more privileged adulthood. Although the bar is set at 18 to vote or join the military, the three additional years are somehow necessary to develop the maturity to make informed decisions about intoxication. The merit here is questionable as well, but what is evident is that by setting the same age for the purchase of alcohol and cigarettes, there is an implication that the two are comparably problem-

atic in terms of public health. I won't make any ludicrous claims about the healthfulness of smoking; tobacco is dangerous for both the smoker and anyone in her immediate vicinity. In such terms, smoking bans in public places certainly make sense. But smoking in private areas carries no potential harm for anyone else. It is something that folks probably shouldn't do, but adults should ultimately be able to make their own decisions.

some politicians. We as American adults are entitled, however, to make personal decisions according to our own elective calculus. Self-determination is a fundamental right and should not be impugned. If I as an 18-year-old choose to smoke in the privacy of my own living space, there is zero potential for greater societal harm of the sort introduced by alcohol use. To draw parallels between the two and regulate their sale equally is therefore inappropriate.

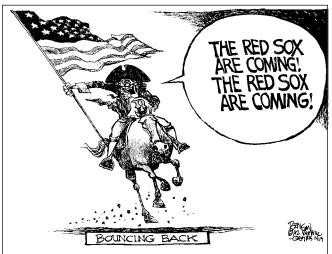

There is a fine line between maintaining public health and trampling on individual rights, and the Bloomberg administration has again chosen to jump right across it.

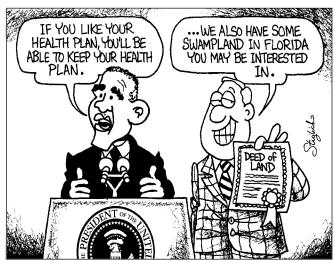

Today, every American knows the dangers of smoking. Personally, I have seen more public service announcements demonizing the act and commercials for smoking-cessation treatments than cigarette ads. That some choose still to smoke is not therefore a demonstration of ignorance; rather, it is an informed choice that weights the benefits of tobacco use above the health consequences. Viewed objectively, the choice to smoke is quite silly, as is joining the military as an infantryman or voting for

Smoking is a bad habit. But as Americans, do we not have the right to make bad choices? I am a legal adult, capable of buying a gun or being sentenced to life imprisonment. To claim that I lack the maturity to make a well-informed decision on tobacco usage is thus insulting to my dignity as a citizen. I am an adult and will smoke if I want to. Restricting my ability to purchase cigarettes isn't a matter of public health; it is a matter of unjustified government interference.

CORRECTIONS

The Arts Events calendar in Friday's issue listed the incorrect date for the Folk Dancing with Live Electric Balkan Music event. It was on Sunday, Nov. 3, not Saturday.

OPINION POLICY

Editorials are the official opinion of *The Tech*. They are written by the Editorial Board, which consists of Chairman Sarah Ritter, Editor in Chief Anne Cai, Managing Editor Ian M. Gorodisher, Executive Editor Deborah Chen, and Opinion Editor Jacob London.

Dissents are the signed opinions of editorial board members choosing to publish their disagreement with the editorial

Letters to the editor, columns, and editorial cartoons are written by individuals and represent the opinion of the author, not necessarily that of the newspaper. Electronic submissions are encouraged and should be sent to *letters@tech.mit.edu*. Hard copy submissions should be addressed to *The Tech*, P.O. Box 397029, Cambridge, Mass. 02139-7029, or sent by interdepartmental mail to Room W20-483. All submissions are due by 4:30 p.m. two days before the date of publication.

Letters, columns, and cartoons must bear the authors' signatures, addresses, and phone numbers. Unsigned letters will not be accepted. *The Tech* reserves the right to edit or

condense letters; shorter letters will be given higher priority. Once submitted, all letters become property of *The Tech*, and will not be returned. Letters, columns, and cartoons may also be posted on *The Tech*'s Web site and/or printed or published in any other format or medium now known or later that becomes known. *The Tech* makes no commitment to publish all the letters received.

Guest columns are opinion articles submitted by members of the MIT or local community.

Q.E.D. BY ERIKA TRENT

WELL AT LEAST MY THEORY PROVIDES AN ANSWER!

MOVIE REVIEW

Alien invasion movie

Ender's Game, although not true to the book, is worth watching

By Karleigh Moore STAFF WRITER

My mother bought me a copy of Orson Scott Card's Ender's Game when I was in the third grade — I have been waiting for this movie ever since. The story is set on Earth, many years in the future. The planet is recovering from a devastating attack from the Formics, an alien race that appeared to try to invade Earth. In order to protect humanity, the world government trains brilliant children at The Battle School, hoping they will become new leaders of the International Fleet and save the world from another attack. The Fleet is looking for their next legendary commander, and they think that this is to be Ender Wiggin.

As far as being true to the book, I'd say that Ender's Game ranks between Harry Potter and The Lord of the Rings. The plot was not heavily altered and all the characters you want to see do make an appearance, though many events were omitted. For those of you who read the book, you may be disappointed to discover that the film focuses only on Ender's doings, so the scheming of Peter and Valentine is omitted. We don't get as much character interaction or development as I would have liked. The film does not show

This is a movie you have to see if you've read the books, simply because you've waited so long.

Ender developing the friendships that made the story so appealing, and most of the interactions between Ender and his "friends" felt mechanical to me, not doing the camaraderie of Battle School friends justice. We don't really see or feel Ender's transformation from an innocent child into a brilliant military leader. We are not privy to many of the internal struggles that helped to flesh out the character in the book, and because of this, Ender was not as relatable as he could have been.

However, the movie tries to makes up for its lack of character interactions and development with excellent casting and incredible settings and effects. The Battle School is just what I imagined - the games in the Battle Room are awesome, I loved the costumes, and the alien planet is exotic and creepy. Harrison Ford did a convincing job as Colonel Graff and Asa Butterfield was perfect for the role of Ender, although the plot seemed rushed, possibly because most of the interesting parts of this story are told from inside Ender's head, through his reasoning and internal debates

In all, the film was not as thought provoking and inspiring as the book was, but did do a decent job of showing the audience the fantastical and futuristic elements of the story, thanks to modern technology and

computer-generated imaging. This is a movie you have to see if you've read the books, simply because you've waited so long for it to be created. As always, the book will be better than the movie, and those of you unfamiliar with the story will probably really like the film for its effects, settings, and situations.

Asa Butterfield stars as Ender Wiggin, a prodigy of the Battle School, in Ender's Game.

THEATER REVIEW

The Power of Duff

The repercussions of one man's attempt to save the world

By Denis Bozic STAFF WRITER

An ordinary anchorman leads a relatively ordinary life until one day when his father suddenly dies. Instead of closing one of his broadcast reports by traditionally thanking the audience for watching the news, he decides to break the norms and pray. The erratic decision receives glowing praise from the local community, and the story gets a special twist when the anchorman's subsequent broadcast prayers come to life. With these new acquired powers, he decides that it is his duty to pray for other people's sufferings and save the world.

Some of these questions get answered. Some are left to be solved by your imagination.

This is the baseline story of The Power of Duff. Of course, there are minor details to the story that turn the seemingly idealistic plot into a dramatic satire. The anchorman, Charles Duff (portrayed by David Wilson Barnes), cheated on his wife and now has no connection with his son. His co-workers are all struggling with their personal problems and add an extra burden to his messiah duty. On top of that, he has to deal with his supervisor, who only cares about how to make profit from his godly experiences.

It's a fun and thought-provoking story

that will surely incite your mind. Despite the over-the-top vulgar dialogues and at times overly mundane conversations, the play asks all the right questions — how powerful is faith? Where is the fine line between spiritual hypocrisy and true dedication? When do you help others and when do you help yourself? How do you know when certain situations are out of your control?

Some of these questions get some are left to be solved by your imagination, and some just turn out to be a big bite for the playwright. For a story of such indepth questions of non-trivial importance, the play never manages to clearly explain the relationship between Charles' decisions and the consequences in the lives of the people that he loves. Even though the beginning of the plot shows signs of a promising and unconventionally humorous revelation of the divine mystery, the end gets lost in all the attempts to resolve the side plots and bring the story to a concluding point.

However, when the story manages to bring about good moments, these moments turn out to be exceptionally successful and witty. John Ebbs, portrayed by Brendan Griffin, adds the winning combination of rudimentary and sentimental humor to the story, with his brilliant depiction of a must-love supporting character, and Ron Kirkpatrick, played by Joe Paulik, brings in the satirical element of the play by portraying the overly dramatic news reporter. The mobile on-stage rooms, visually compelling TV screens, and newsroom desks make up the excellent stage setup, which brings the hectic and slightly fake atmosphere of the newsroom to life. And overall, the exaggerated representations

David Wilson Barnes in the Huntington Theatre Company's production of Stephen Belber's The Power of Duff.

of the mundane conversations, and characters' gesticulations and emotional responses compensate for the play's lackluster outcome by making the plot more amusing than it ever would be in a real-life setting.

The play most likely will not leave you with the feeling of a cathartic epiphany, but don't be fooled — under the satire and exaggerated humor, there are a lot of questions to be pondered and answered. You might not find the answers within the scope of the play's plot, but that doesn't mean it will leave you without food for thought.

Last Seen by Sophie Calle Exhibit explores absence and memory

following the museum's art theft

By Stephanie Ihezie

Red, the color of passion and emotional charge. That is what you see upon entrance into Sophie Calle's Last Seen exhibit. Perhaps you may walk in expecting to see sumptuous pieces of art, rich in detail, with figures draped in the finest garments indulging in foods or acts that stimulate to the highest senses. Instead you see ... nothing.

Calle's body of work explores absence and memory. What can we remember when there is nothing there? Is art still the same if the strokes of the paintbrush or the pixilation of the photograph are not physically tangible?

To give some background, this exhibit is the brainchild of the Isabella Stewart Gardner's Museum art heist of 1990. Thought by many to be one of

the greatest art heists in the history of the United States, it resulted in the theft of thirteen original pieces of work estimated at half a billion dollars. The works included five drawings by Degas, and six paintings by Rembrandt, Flinck, Manet, and Vermeer. While FBI agents have stated that they are sure who the thieves are, to this day the works have yet to be rediscovered. There is a \$5 million dollar reward for information that will lead to their tracking.

Following the heist, Calle came to the museum to ask staff to describe the artworks from memory. Each response was written and paired with a photograph of the different empty space where the stolen work was once placed. Both components were framed to form a new piece of art, and Calle repeated this process for each of the missing pieces.

The Last Seen collection was

What Do You See?, part of Sophie Calle's exhibit at The Isabella Stewart Gardner Museum

Sophie Calle: Last Seen

Isabella Stewart **Gardner Museum**

Through March 3,

first shown at the Carnegie International and toured other museums around the world. but it hasn't been shown at the Gardner museum or anywhere else in Boston until now. When the Gardner museum invited Calle in early 2013 to revisit her project, she not only agreed, but also added a new collection, What Do You See? to the exhibit. This latter collection adds a fresh layer to the already thought-provoking imaginations of the former collection. In What Do You See?, Calle once again recruits people to ask for their thoughts, yet this time the people are looking at the framed empty space rather than the empty space itself. They were not told about the missing pieces of art that once hung on the empty space and that had led to the framed piece. The test was whether these people would pick up on the fact that something was missing or if they would focus on the blank framed canvas. No two responses were the same, but in order to find out what they said, you'll have to see the pieces for

Dear reader, when you go to see these collections, would you care to answer what you see?

SCHOOL OF HUMANITIES, ARTS, & SOCIAL SCIENCES

IN YOUR COMMUNITY

Dean Obeidallah

Comedy with social commentary

By Kali Xu

CAMPUS LIFE EDITOR

"Immigrants work hard. Last year at this very time, we had Hurricane Sandy going on. In my neighborhood in New York, every American restaurant closed. What was open? Chinese restaurants. How do I know that? I look out my window, and the Chinese delivery guy I know is on his bike, delivering food because somebody ordered delivery during a hurricane. Ok, I ordered delivery. Because I knew he'd be there, and there he was!"

Dean Obeidallah, a New Jersey-born comedian of Palestinian-Italian descent, uses comedy shows, interviews, and online writings to deliver political and social commentary. He has appeared on Comedy Central's "Axis of Evil" tour, ABC's "The View," and various other TV shows. He has written for CNN, The Huffington Post, and The Daily Beast. Along with Jewish comedian Scott Blakeman, he started the "Standup for Peace" tour. The two describe themselves as "the two-comedian solution to peace in the Middle East." He also co-directed the recently released comedy documentary "The Muslims Are Coming!" which features a group of Muslim-American comedians touring the country performing standup and interventions to combat religious bigotry, including interviews with comedy and TV icons including Jon Stewart, David Cross, Rachel Maddow, and Russell Simmons.

While Dean is now a successful comedian and political commentator, he hasn't always been in the business of comedy — he started out as a lawyer planning to enter politics. After unhappily practicing law for several years, he was encouraged by his colleagues to compete in the funniest lawyer competition held by the New Jersey Bar Association. He tested out comedy by performing at night and eventually quit his job to do legal-related work for *NBC*, which he

describes as akin to going to comedy grad school.

The worst advice he's ever been given is: "Stay a lawyer. Keep doing the career you hate and that you regret waking up every day to go do." However, he does grant his law degree some credit in his new career as a political commentator, saying, "A law degree is great for anyone if you have the money to waste on it. It's good to know your rights."

When Dean first began as a part-time performer, his comedy material was not politically inclined. His focus shifted after 9/11 to help dispel the new wave of fear and hate directed at Arabs and Muslims. Regarding these negative views, Dean comments, "There are bad people; I get it. Overwhelming they're all good, but the teeny exceptions are what define us, and that's the challenge. For every minority group in America, I think the challenge is to fight against that, that you're being defined by the worst people."

Dean has performed all over the U.S., Canada, and the Middle East, and his jokes reflect his international experiences.

While Dean is now a successful comedian and political commentator, he hasn't always been in the business of comedy.

"The Lebanese are very resilient people. This is how I got directions walking around. I'm not kidding. I asked this guy, 'Where is this place?' He goes, 'Ok, it's easy, come here my friend. Go down three blocks, you see a big building with bullet holes; you make a left. You keep walking, and you see a big hole due to a car bomb. Not the first one, the second one. You make a right. You

OFIR NACE

CAMPUS

Dean Obeidallah performing in a comedy show hosted by the MIT Muslim Student Association.

keep walking. If you hear explosions, you've gone too far. You come back, you see guys near the barbed wire, don't look them in the eye. Keep walking, keep walking, and there's Pizza Hut."

"I like Dubai very much ... the construction five years ago was insane. I was on a street corner, and this guy goes, 'Uh, sir, you have to move.' I'm like, 'Why?' and he says, 'We're building an office building here. It's going to be beautiful. It's oceanfront.' I'm like, 'There's no ocean,' and he says, 'Come back next week.""

As for the future, one of Dean's goals is to get more involved in the media and to inspire more Muslims to do the same. He believes involvement in the media and the arts is crucial to ensure that news reports about terrorists and conflict in the Middle East aren't people's only exposure to Muslims. Dean says, "It's important for the voice of Muslims to be heard. The more it becomes commonplace, the more it will be normal to people, not something to be hated and feared."

While many of his performances at colleges, such as his show last Saturday at MIT, are hosted by Muslim student associations, his audience base is very broad. His documentary tour through the deep South and West attracted many audiences with zero Muslims, with the aim of meeting as many people as possible and eliminating misconceptions about Muslims. After all, why do people fear other people and things they don't know? Ignorance. Laughter, on the other hand, is a universal experience that brings people together.

Briefs, from Page 1

Decision in Swartz documents suit

The District of Columbia District Court judge has issued an order in the suit for release of the Secret Service's file on Aaron Swartz, deceased Internet activist. Kevin Poulsen, a news editor at Wired.com, had filed suit against the Department of Homeland Security in April for the release of this file, which is thousands of pages long. MIT and JSTOR had moved for intervention as third par-

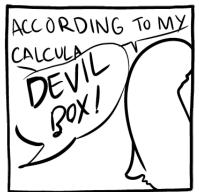

ties, seeking the redaction of the names of their employees in the documents.

United States District Judge Colleen Kollar-Kotelly's Joint Stipulation for Redaction and Release of Documents specifies that in addition to redactions made by the Department of Homeland Security before their release, MIT and JSTOR will be allowed to propose additional redactions. They will then be released to Poulsen, the plaintiff as further redactions are declined or accepted or rejected based on the Freedom of Information Act.

Fewer freshmen than last year receive fifth week flags

3.091 changes partially responsible for reduction

Flags, from Page 1

Programming, Donna L. Friedman, listing specific resources for the student. These include Student Support Services (S3) and Seminar XL, a structured study group provided by the Office of Minority Education (OME). In addition, she asks each student to provide a self-assessment. Oftentimes, she says, it is an issue of time management.

than one flag, 17 receiving two flags, and 3 receiving three flags. No HASS classes issued fifth week flags. If a student receives more than one flag, Dennis Freeman, the Dean for Undergraduate Education, sends an additional email to the student particularly encouraging them to go to the OME and participate in Seminar XL.

Part of this year's decrease in fifth week flags can be attributed to 3.091, which issued only

Part of this year's decrease in fifth week flags can be attributed to 3.091, which

issued two flags, down from 29 last year.

"Most students are struggling with time management and learning how to be a successful learner here," said Friedman. "It's often hard - many students are just spread thinly with extracurriculars and varsity sports and other things. Academics, for the first time, is something they have to put more energy into. Learning to do that is part of the transition to MIT."

A total of 167 flags were issued, with 20 freshmen receiving more two flags this year, compared to 29 flags last year. This semester, 3.091 is experimenting with incorporating more online instruction into the class, and replacing midterm and final exams with weekly online assessments.

"I think those students that needed to get the message got it by week two," explained 3.091 Professor Michael J. Cima on the large decrease of flags this year. "This assessment method gives people several opportunities for feedback each week. Our old assessment approach was primarily based on the first midterm. That is just too long to wait. I think the current students changed what they needed to change much earlier."

7.012 gave out the most fifth week flags, handing out flags to 14.6 percent of the freshmen in that class (or 36 out of the 247 freshmen). 7.015 and 7.016, the two new introductory biology classes, issued flags to 7.5 percent and 9 percent of their freshmen, respectively.

Six GIR classes — 8.012, 18.03, 5.112, 18.014, 18.01A, and 8.02 gave out no flags.

Friedman said that students who are flagged in the fall semester generally are not flagged again in their spring semester, suggesting the freshmen in the spring are usually "a new crop."

"I think a lot of freshmen feel like failures because they got a flag, but really, it's what you do with that information," emphasized Friedman. "What I always say to students is that it's the first bump in the road, and how you deal with it is predictive of what you'll do here on in."

Water polo comes home

MIT hosts three games over the weekend

By Charlotte Brackett

With the 2013 season slowly coming to a close, the MIT water polo team returned home for the first time since mid-October to host a weekend of games. On the first day of the three-game weekend, the Engineers defeated Fordham University in a low-scoring game by a score of 9-7. They then fell to St. Francis College later that day, 12-5. Tech is now 10-12 on the season.

Against the Rams, Tech was led by Zachary S. Churukian '17 and Ory Tasman '16, who both scored two goals apiece. On top of his two goals, Churukian also had four steals, one assist, and one ejection drawn. Goalkeeper Nolan J. Kruse '17 did a good job in net, notching 10 steals throughout the four periods and allowing just seven goals.

The two teams were evenly matched for the majority of the game; both scored just one goal in the first period and an additional four in the

second to remain tied at five going into the third quarter. Fordham took the lead three minutes in but the score was tied up once again 30 seconds later. Kale T. Rogers '16 gave the Engineers a one-goal lead going into the final quarter when he scored his only goal of the game with three minutes left on the clock.

MIT took a two-goal lead a minute into the final quarter when Michael S. Farid '14 scored his first of the game, but the lead was lessened two minutes later with another Fordham goal. With 53 seconds remaining in the game, Tasman scored the Engineers' ninth goal, and MIT was able to hold onto the lead until the clock ran out.

In the game against St.

Francis that night, Tech played from behind during the first quarter, allowing two goals before Churukian got MIT on the board with a minute remaining on the clock. With the score at 4-1 a minute into the second quarter, Kruse had a great block when a Terrier took a point blank shot at the net. Following a

clean pass from Churukian to Cheney that found the back of the net and another by Tasman, the Engineers went into the third quarter trailing 7-3.

Tech had a strong third quarter, scoring a goal of its own and holding the Terriers to just two goals. Ian E. Zaun '17, who was replacing Kruse in net, had a number of impressive blocks throughout the quarter. In the final period, with a score of 9-4, Tasman took four back-to-back shots, but each time the goalie managed to punch the ball out of the way. MIT took a number of strong shots throughout the remaining minutes, with a shot from Tasman finding the back of the net with just over two minutes remaining. The game ended with a St. Francis

MIT will return to the pool bright and early tomorrow morning, hosting Iona College at 9:30 a.m. The four seniors on the team who will be playing in their last home game for the Engineers will be honored before the game begins.

MIT takes down WPI

Engineers win in final conference game

By Ali Soylemezoglu

SPORTS STAFF

Nov. 2, 2013 was a beautiful day to play soccer as the players of MIT and WPI came onto the pitch to play the last regular season conference match. MIT had high stakes in the match. With a win, they would finish the first in the conference and host the playoffs. The match started off slowly as both teams tested each other and seemed evenly matched. As halftime drew near, Sean D. Bingham '16 connected with a wonderful through ball and beat the keeper to pull MIT up 1-0. The first half didn't see any more goals and MIT took the lead into halftime.

The story of the second half was much different. Although WPI did come close to scoring on certain occasions, MIT dominated from the first whistle of the second half until the end of the match. MIT's Matthew A. Monheit '14 scored a beautiful header ten minutes into the second half to pull MIT 2-0. MIT's prolific goal scorer, Sean Bingham, was also not done

for the day as he scored a neatly placed shot to make it 3-0. At this point, WPI's guard had been completely let down and Alexander M. Dago '15 hit the final blow only two minutes after Sean Bingham's goal to declare the scoreline: 4-0. MIT did come close to scoring at least a couple more goals, but the fans were content with the four goals they saw.

With this decisive 4-0 victory, MIT clinched first place in the conference and the right to host the playoffs, starting next week. MIT is looking strong going into the playoffs, so it is only right that the fans go out and support the team. The WPI match did have a great turnout with several enthusiastic fans, such as Alex Romero and Carolina Fejgielman, who were doing the Beaver Call after the goal and were excited that MIT will be hosting the playoffs. They are looking forward to the upcoming matches. Whether it is doing the Beaver Call or just coming and shouting "Go Tech!" fans should definitely come and show off their MIT pride.
